Chittaranjan Locomotive Works

Use of new technologies to solve roof leakage in railway quarter

Chittaranjan;19 February 2024:- The problem of leakage from roofs in Chittaranjan's colony is years old. New technologies are being used to solve this problem. In this, four quarters are being repaired in four ways. In the first method, a GI sheet cover is being installed over the existing roof. In other quarters, chemicals are being laid by Asian Paints, Berger Paints and Sika companies. After this, the roof will be filled with water to see whether leakage occurs again or not. The methods which are found better will be used in all the houses.

This work was inspected by the General Manager on Monday by going to the roof along with the Chief Engineer.
